Sensors and sensor-switched lights

Intelligent lighting and sensor technology for professionals.

Innovation and top quality

STEINEL has been synonymous with uncompromising brand quality since 1959. STEINEL's engineers have now been devoting attention to lighting and sensor systems for over 30 years. We designed the world's first high-frequency indoor light in 1987 and are still the world's brand leader in this segment. Our expertise in sensor technologies ranges from infrared, high-frequency, ultrasonic to camera sensor systems. We were the first company to develop a human presence sensor capable of controlling light, heating and air-conditioning on demand. Our latest product is nothing short of a revolution. The iHF 3D is the world's first high-frequency motion detector for outdoors.

German engineering. Made in Europe.

Nowadays, a product must be considered in many different ways. Performance, design, long life, environmental compatibility, ergonomics and ease of installation are just some of the aspects. STEINEL constantly sets new standards with products that are engineered only in Germany and made in our own factories in Europe. Because of this, our products meet the standards defined by VDE, ENEC and TÜV.

We are 100% convinced of the quality of our products. Using the very best components and perfectly combining them, we are able to make a quality promise which we naturally pass on to our customers. For further details, visit steinel-professional.de/garantie.html

High-tech material.

And, with our XLED home 2 series – we are now for the first time using HCMC (High Conductive Magnesium Composite) for cooling. Coming from the world of aerospace, this material is not only very light but is also a perfect dissipater of heat. This gives our LEDs a life expectancy of up to 50,000 hours.

World first.

Our DL Vario Quattro PRO LED is

light diffuser. Four adjustable pyro sensors provide precision detection exactly where you want it.

the world's first sensor-switched light with sensor lenses integrated into the

Cleverly thought through from start to finish.

Our new 3000 series features 8 sensors in 4 designs and with 6 interfaces. The result is over 100 products. This means you will always find the right sensor for your application. Large terminal compartments ensure fast, easy installation.

Excellence in 4 technologies. Perfectly designed.

We are the world's only manufacturer to master 4 sensor technologies. Yet STEINEL not only sets store by the inner values our products offer. Attracting many awards on the international stage, our products stand out for their ease of use and perfectly complement every application.

MAXIMUM **ILLUMINATION** FLEXIBILITY

Thanks to the new shaft mechanism, the freely swivelling flat-design LED panel provides perfect illumination in all applications.

PERMANENT ILLUMINATION

The additional switching conductor (L') also makes it possible to operate the floodlight in override mode for permanent illumination. The newly developed HCMC cooling system also ensures optimum heat dissipation, maximising the life expectancy of the LEDs. **XLED** Exquisitely designed sensor-switched floodlights for lighting moods beyond the edge of perfection.

CUSTOMISED SENSOR SETTINGS

With the mini-sensor in the L 710 LED it is possible to select four sensor programs, including night-light functions and soft light start.

LIGHT AT DUSK

Lights with photo-cell controller automatically switch ON in the evening and OFF again in the morning in line with ambient light level.

HOUSE NUMBER INCLUDED

The LN 1 LED comes complete with a sheet of house numbers; practical and quickly ready to use.

DETECTS PRECISELY WHERE YOU WANT IT TO.

4 infrared sensors can be adjusted to suit any specific situation and provide precision coverage of the chosen sensor detection zone.

GENEROUS REACH, SET WITH PRECISION

The 4 sensors can be precisely adjusted to provide a reach of 2-8m in each direction.

SHINY MATERIAL

The stainless steel featured in the L 260 LED and the GL 60 LED instantly gives them an impressive look of elegance.

DETECTION OVER LARGE AREAS

With a reach of up to 12 m, all 3 lights can cover large areas. On top of this, the GL 60 LED provides 360° coverage with no blind spots

WELL-ILLUMINATED THROUGHOUT THE NIGHT

The basic-light function provides subtle illumination all night long. Light is automatically turned up on detecting movement.

*Emergency-light version **Slave version without sensor

FOR ALL DEMANDS AND MAXIMUM FLEXIBILITY

Models with warm white and neutral white light. Plus 3 different sizes with lumen levels to match. And last but not least: sensor-switched, slave and emergency-light options an entire series that leaves you wanting for nothing.

REACH DOUBLY LIMITED

Sensor detection can be limited in four directions using potentiometers as well as with the metal shrouds provided.

LIGHT **EVERYWHERE**

Several lights can be interconnected, making it quick and easy to implement large-scale projects. Includes basic light level function

Motion detectors

Motion detectors

At last no more inadvertent triggering.

sensIQ. Premium class technology for greater reaches.

Forget everything you already know about outdoors sensors.

No blind spots, no compromises, no errors. The iHF 3D is the perfect motion detector for outdoors. Whether on facades, carports, patios or in car parks – the intelligent high-frequency sensor only switches light ON when it's really needed. Firstly, because it can distinguish between human movements and the movements made by bushes, small animals and rain. Secondly, because the user can adjust the detection zone from 1 - 7 metres in three directions with absolute precision to suit any particular need.

Motion detector iHF3D

Dimensions: 120x117x120mm

INTELLIGENT HIGH FREQUENCY

First high-frequency motion detector for outdoors. Prevents inadvertent triggering and can be precisely adjusted in three directions

IMMUNE TO ANIMALS

Intelligent sensor and software-aided evaluation of specific movement patterns reliably distinguishes between human and animal presence.

WEATHERPROOF

Detection irrespective of temperature. Reach and detection quality remains unchanged in summer and in winter.

Fits into any 55 mm surround from Berker, Busch Jaeger, Gira, Jung and Merten

FOR MODERNISATION AND REFURBISHMENT

The IR 180 UNIVERSAL uses patented 2-wire technology without leakage current. As a result, any lamp can be switched ON without flickering.

THE NEW STANDARD FOR SENSOR SWITCHES

With a 180° angle of coverage, nothing remains unnoticed to the right and left of these new sensor switches. The KNX versions additionally indicate temperature and air humidity levels measured.

DALI The interface for intelligent lighting.

DALI (Digital Addressable Lighting Interface) offers almost boundless potential. Lighting control, sensors, electronic control gear and lights work exceptionally well with the professional interface standard. They communicate with each other and respond to each other without any obstacle whatsoever. In conjunction with constant-lighting control via 2 light channels, STEINEL DALI presence detectors provide optimum control for strip lighting in relation to incident daylight. With the RS PRO 5800 LED range, STEINEL also presents advanced diffuser luminaires with swarm intelligence. Communicating on the DALI bus, swarm technology lets light "move along" with you.

DALI plus. The gateway to intelligent lighting control.

Integrating a complete control unit into the load section of a sensor has enabled us to combine the key functions for DALI-based lighting control for straightforward installation and use. This provides an easy, fast and cost-effective way of providing solutions for many different applications. DALI plus - developed for everyone wanting to create and quickly implement innovative lighting management. For classrooms, cubicle areas or single offices: Our DALI plus solution is both easy to use and effective. With intelligent sensors that come with a complete lighting control module. The control unit fitted in the load section makes installation both fast and easy. Using the Smart Remote, you can control up to 64 luminaires via 3 lighting channels by app. DALI plus is the ideal solution for anyone wishing to plan and install intelligent lighting with just a few components.

Light management, revolutionarily simple.

LiveLink is the new DALI-based light management system developed by STEINEL in cooperation with the lighting specialist TRILUX. What used to be very complex and time-consuming can now be configured with LiveLink in just a few minutes without any specialist knowledge or programming experience. Operation is simple and intuitive via tablet or smartphone. The LiveLink app assists you step by step through the installation process. Common application scenarios, such as in an office or classroom, are stored as so-called use cases and make planning particularly simple. Special, highly sensitive LiveLink sensors from STEINEL permit precision lighting control in line with room use and the prevailing level of daylight. This means it provides electrical fitters and users with professional and yet simple and secure access to the possibilities of lighting control. Almost every segment and application can benefit from LiveLink because it caters to any scenario and standard.

Benefits from STEINEL

- LiveLink sensors with infrared, high-frequency and ultrasonic technology
- Fast, easy start-up via app
- An integrated, autonomous Wi-Fi network provides optimum connection and security

Corridor, passageway	Corridor starter kit	4007841 052836

DALI-2 The new benchmark.

Among other aspects, the new DALI-2 standard provides the basis for standardising sensor communication in DALI systems. This ensures compatibility among all brands. DALI-2 enables sensors to communicate collected sensor data to higher-level lighting management systems. This means 64 lights and 64 sensors can be matched to the lighting or building management facility with a good level of flexibility. They are also easy to assign to usage zones via lighting or building management. **STEINEL PROFESSIONAL offers a wide range of DALI-2 input device sensors for every application.**

The world's largest KNX range

The language of home and building automation is KNX. There are millions of successful KNX installations across Europe and worldwide. With the largest sensor programme worldwide, STEINEL provides the "sensory organs" for KNX. The sensor technologies we offer - passive infrared, high frequency, ultrasonic and camera sensor technology - are available in many highly practical sensor versions. This means STEINEL can give you the right sensor for any application.

We are not just a partner for KNX, but also for planners, architects and electrical fitters. With them, we seek dialogue for ideas and suggestions from practical experience. Our service covers a comprehensive portfolio ranging from planning assistance, providing data to answering day-to-day questions. We would also be happy to come and see you - whether in the office or on site.

Smart Remote One for all.

STEINEL sensors and sensor-switched lights are very easy to control via remote control and the associated app. For this, a smartphone or tablet is placed on the Smart Remote and connected via Bluetooth. An infrared interface permits communication with the sensors and lights. It doesn't get any smarter than that!

Remote control Smart Remote

Settings are made conveniently via a smartphone or tablet. A universal remote control that replaces the RC1 – RC10. Available for IOS and Android EAN 4007841 009151

The STEINEL App. Control via Bluetooth.

The STEINEL app can also be used without Smart Remote for controlling Bluetooth-capable luminaires. This makes it easy and convenient to make all sensor and lighting settings. We are constantly expanding our range of Bluetooth-capable luminaires.

Current compatible products are:

- L 800 LED iHF
- L 810 LED iHF
- L 820 LED iHF
- L 825 LED iHF
 L 830 LED iHF
- L 835 LED iHF
- L 840 LED iHF
- GL 80 LED iHF
